AIR FILTERS

FILTER-LINE™
SERIES GRM
2" FIBERGLASS — STANDARD
SCRIM BACKED ROLL MEDIA

Description

The FILTER-LINE™ Series GRM — 2" Fiberglass Roll Media is produced from continuous strands of fiberglass. The media is a graded density blanket and all fiberglass strands are bonded by a thermo setting bonding agent. Media will yield a minimum thickness of 2 1/2" when unrolled in the air stream. The media is charged with a gel-type adhesive to effectively trap and hold dirt particles. The entire media blanket is reinforced by a fabric scrim netting, which maintains media configuration. The 65 feet long roll is provided with trailers and leaders for ease of installation. GRM Roll Media is available for all types of Roll Filter machines.

Construction

CONTINUOUS FIBERGLASS STRANDS

Series GRM Media is continuous strands of fiberglass, thermo bonded to form media. Media has a dry weight of 14 to 18 grams per sq. ft. Each sq. ft. of media has @ 6.0 miles of fiberglass.

GRADED DENSITY MEDIA

Series GRM Media is progressively denser from the air-entering to the air-leaving side. Fiber diameter begins at 50 microns on the clean side and reduces to 25 microns on the air-leaving side.

GEL-TYPE ADHESIVE

Series GRM Media is charged with an odorless, non-toxic gel adhesive. Each sq. ft. of media contains 12 to 16 grams. The gel is flameproof and will not flow at 150° F operating temperatures.

FABRIC SCRIM NETTING

Series GRM Media is fully supported on the downstream side of the media with a fabric scrim netting. This reinforcing backing is totally secured to the media and maintains media configuration.

MEDIA TRAILERS AND LEADERS

Series GRM Media is supplied with a heavy duty trailer and leader to assist in the installation of the Roll Media. Trailers and leaders are securely sewn to the GRM Media blanket.

ASHRAE TESTED MEDIA

Series GRM Media has been thoroughly tested by independent testing laboratories in strict accordance with current ASHRAE Standards for air filters. Test reports are available upon request.
